DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 5, and 57-64 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 of U.S. Patent No. 6907044 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because of following:

For claim 1, the Patent discloses a method of operating in a network in which a plurality stations communicate over a shared medium (claim 1, lines 1-3 of the Patent), comprising using a carrier sense multiple access (CSMA) service for ordinary communication between the plurality of stations (claim 1, lines 7-9 of Patent); having a first station that

desires to establish a first session of regularly repeated contention-free transmission intervals broadcast information descriptive of the first session to the other stations, wherein the first station can be any of the plurality of stations (claim 1, lines 4-7 of the Patent); and having other stations that receive the broadcast from the first station defer from transmitting during the contention-free intervals of the first session (claim 1, lines 13-15 of the Patent).

Applicant's claims 1 merely broadens the scope of patent by eliminating the term "a plurality of peer devices communication". It has been held that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. In re karlson, 136 USPQ 184 (CCPA). Also note Ex Parte Raine, 168 USPQ 375 (bd. App. 1969) ;

Response to Amendment

3. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
